

RAGT AUSTRALIA INVITES YOU TO ATTEND OUR BROADACRE & FORAGE OPEN DAYS

RAGT Longereng Research Station + RAGT Hamilton forage screening site

8-10 September 2026

Join us from 8-10 September and visit our research and breeding sites to see the latest developments across our broadacre and forage breeding programmes.

At the RAGT Longereng Research Station, you'll have the opportunity to view our Wheat Breeding Program and inspect the latest wheat, barley, oat and canola lines currently under evaluation.

At our Forage screening site near Hamilton, Victoria, you'll see PTN trials and breeding material including cocksfoot, fescue, phalaris, Italian ryegrass, perennial ryegrass, as well as incoming lucerne and spring forage lines.

Our Longereng and Hamilton sites will be fully staffed throughout the event, with guided tours operating on Tuesday and Thursday. Two half-day sessions will be held at the Hamilton forage site on Wednesday.
